

SmartMug

The clever way to order

Martin Dold, Larraitz Orio,
Gürkan Karacocuk, Dennis Tritschler
Albert-Ludwigs-Universität Freiburg

UNI
FREIBURG

Architecture

Connects to the SmartMug

Wireless Communication

Standard Mug

Extension to make your mug smart

Functions

Connection to mug via **bar code reading**

Liquid level sensing via weight (HX711 circuit)

Drinking **statistic analysis** via app

Interactive **drinking games** via app

Waitress communication by changing mug color

SmartMug

SmartMug App

Connect to your SmartMug via Bar Code or by entering manuell the IP Address

Enter your personal Data for some statistics

Display some statistics like promile

Order via SmartMug

Play some drinking games

Connection

SmartMug Protocol

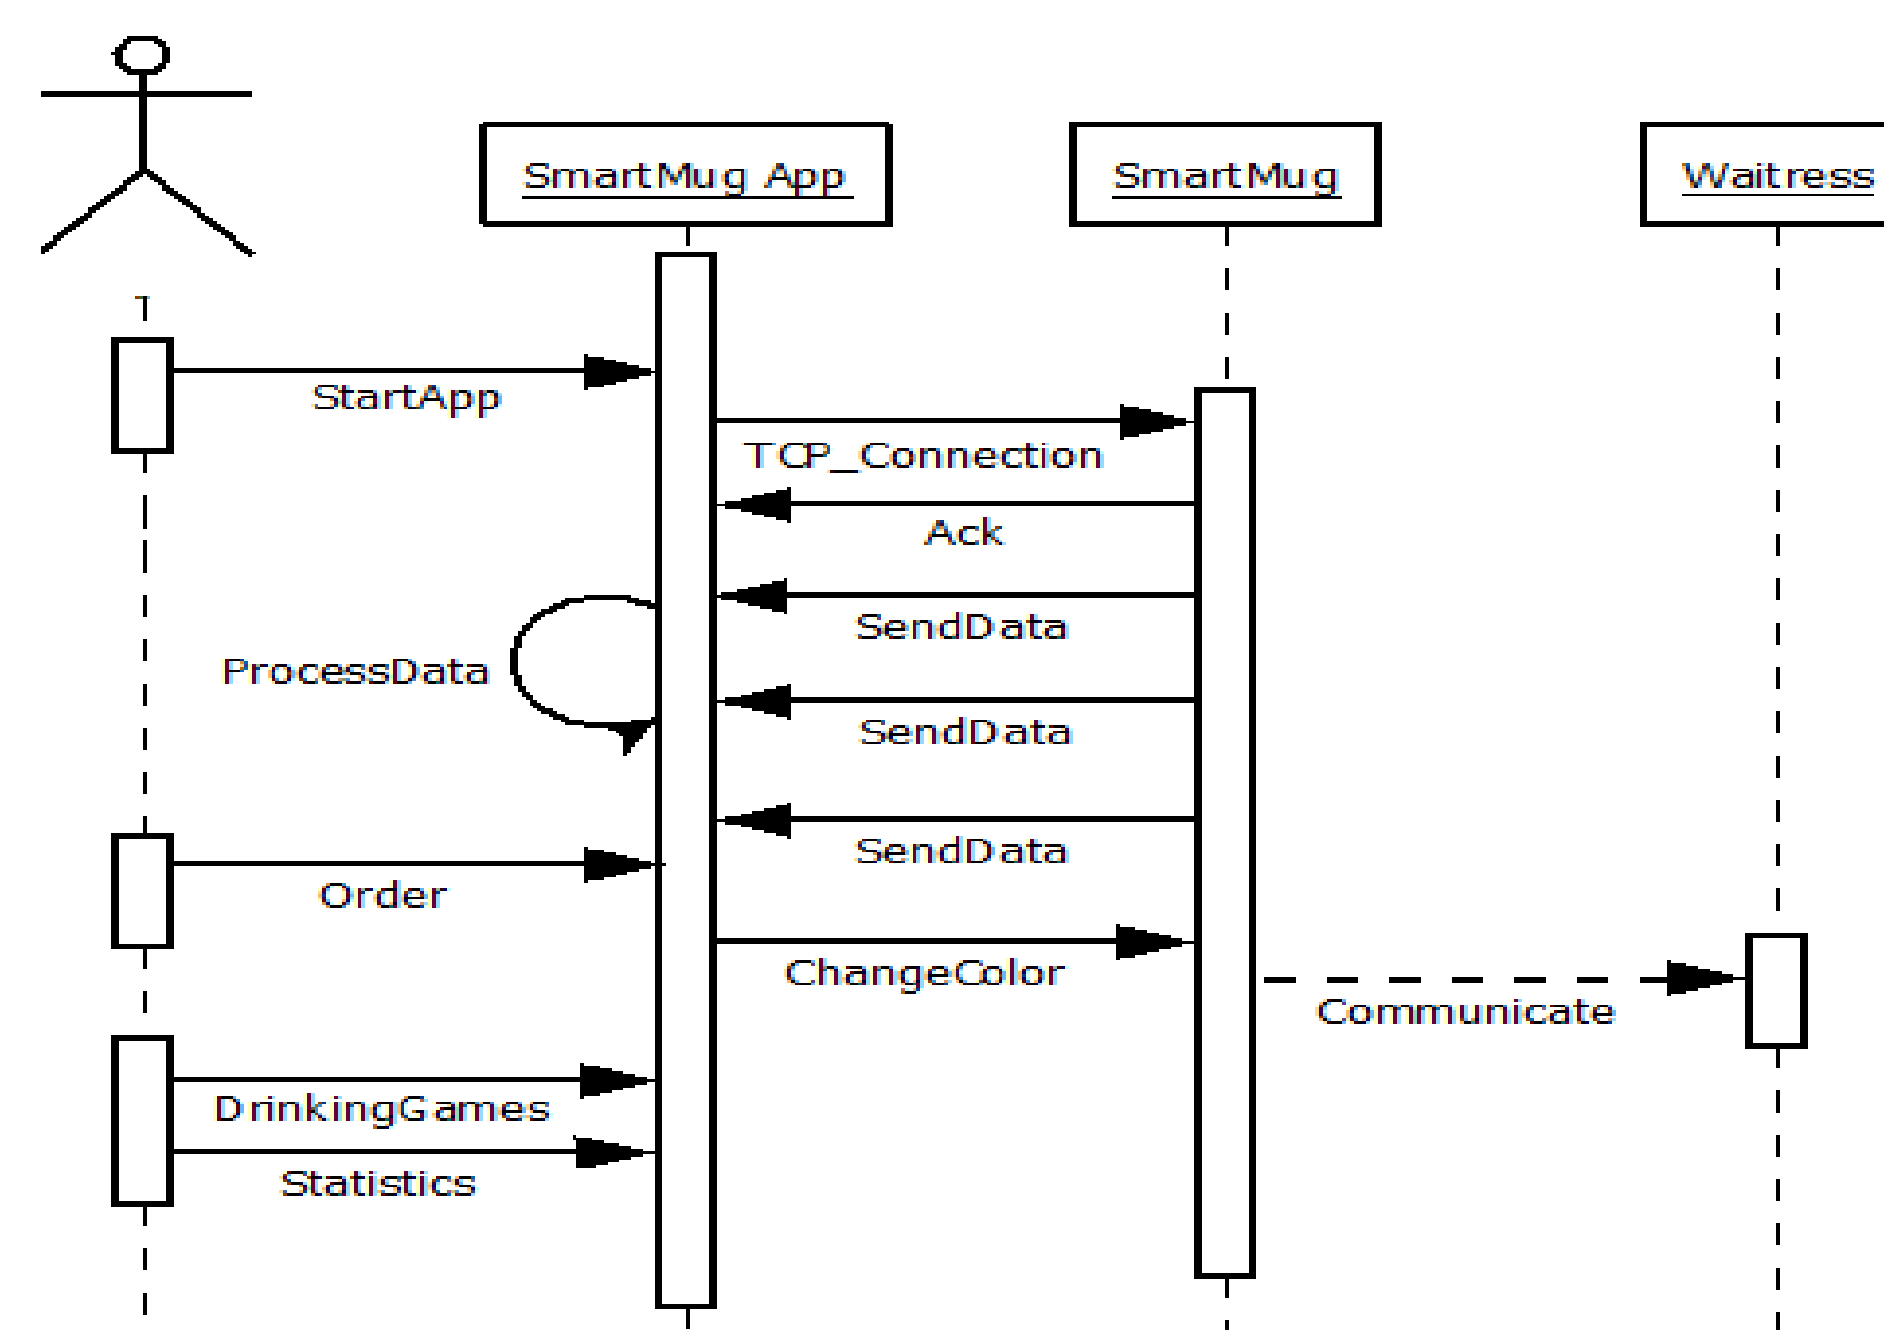

Tag	Length	Value	End of Frame
1 byte	1 byte	n bytes	1 byte

TCP/IP → Wireless LAN according to IEEE802.11b/g standard

Multicast DNS:

Service name: smartmug
Service type: _smartmug._tcp

Sequence diagram

Outlook

- Connection to the barkeeper → Live data for the barkeeper, direct re-order function
- Payment via app
- Capacitive measurement instead of weight
- Connection between taps and SmartMug for automated and exact measurement of the filling level
